

Get more out of your Lightning™ Experience with Skuid.

The formula for rapid innovation.

The enterprise needs made-to-order apps now.

Today's users demand fully bespoke experiences—and industry leaders know that made-to-order apps drive revenue. Apps tailored to the needs of those who use them unleash massive productivity gains and increase organizational engagement.

How do you give users the personalized, consumer-grade experiences they crave without breaking the bank on custom code? That's where Skuid and Lightning™ come in.

Generic components will not solve unique business needs.

With Lightning™, you can search the AppExchange® for a component, then use the App Builder to drag-and-drop it into your page to add new functions that meet your needs. If you cannot find a component that meets your needs, you can write code to build your own. But what if you can't or don't want to write code?

The trick is that we need them now. That's where Skuid makes a huge difference.

If you have complex business processes, you'll likely need to develop custom components with code to succeed. And that takes time and money.

Create unlimited, made-to-order Lightning™ components at blazing speed.

With Skuid, you can create as many bespoke Lightning™ components as you want without writing code. That means that you get all the benefits of Lightning™, plus a made-to-order experience, in a fraction of the time and expense.

Use Skuid in native Lightning™ tools:

- Lightning™ App Builder
- Lightning™ Utility Bar
- Lightning™ Action Overrides

Relieve the pain in your SaaS.

With Skuid and Lightning™, speed up development times, improve processes through made-to-order UX, and skyrocket user productivity.
